Matisse **Callewaert**

Computer Science Engineer - www.matissecallewaert.me

About me

Hi! My name is Matisse Callewaert. I am a computer science engineer who graduated from the University of Ghent. I am an ambitious and sporty young professional passionate about solving the world's problems through technology. I thrive on tackling complex challenges and crafting innovative solutions using the latest technologies available on the market.

Personal

Matisse Callewaert
nationality: Belgian
26/06/2002

Skills

Rust • Software design • Project management • High level architecture • Network security

Interests

Passionate about tackling complex problems by designing efficient and robust solutions. I enjoy breaking challenges into logical components and leveraging proven design patterns to develop reliable and maintainable software.

Curriculum

aug. 2023–sep. 2023 — **Full stack software engineer**
Internship · We are
Worked on various projects where I developed skills in writing professional, clean, and maintainable code. Gained experience in interacting with REST APIs and GraphQL. Proficient in building web applications using React and creating robust backend systems with Fastify, PostgreSQL, and Docker.

2023–2024 — **Full stack software engineer**
Full stack developer · Alternatief BV
Gained experience in maintaining an existing ERP system, which included developing integrations with other ERP platforms, implementing new features, and resolving bugs.

aug. 2025–sep. 2025 — **Full stack software engineer**
Internship · We are
Worked together with the project manager to improve the project management by analyzing tools and writing an integration platform to connect everything.

2025–present — **Co-Founder & CTO**
Strategic Consulting & Digital Transformation · Strategoo
Co-founded a consultancy providing strategic business advisory, digital transformation, and process optimization. Leading the technical delivery of custom software solutions, ERP implementations, system integrations, and workflow automation to help businesses streamline operations and scale efficiently.

2025–present — **Co-Founder & CTO**
FinTech / AI Startup · Finny
Co-founded and architected an AI-powered entrepreneurship platform guiding founders from business idea validation to financial planning and company incorporation. Leading the development of a financial calculation engine, AI-driven advisory workflows, and contextual memory systems to deliver personalized guidance and automate complex financial and administrative processes. Secured Liantis, one of Belgium's leading business service providers, as one of our earliest customers.

Degrees

2020-2024 — **Engineering in Information Technology**
Master - cum laude - winner of Leo Baekeland price · University of Ghent

2024-2026 — **Master of science in computer science engineering**
Master - cum laude · University of Ghent

Publications

Thesis *Real-Time Adaptive Feature Extraction for ML-Based Network Intrusion Detection*
Paper *RustiFlow: Bridging the Gap Between Security Research and Practice using eBPF-based Network Flow Extraction*
Thesis *Denoising captured 3D objects with generative models*

Projects (almost all projects can be found on my Github)

RustiFlow A CLI tool made for feature extraction out of real-time network traffic.
AI Tetris A genetic algorithm learning how to play Tetris.
BashBuddy A CLI tool that manages your commands in categories.
